TOP 10 BENEFITS OF CHOOSING DAISI QUESTION LEVEL ANALYSIS

1. We put it all in one place – no more having to click to 13 different web pages. Available in 3 detailed subject reports, and one 26-page summary report plus individual analysis on our all new "pupil on a page" report.

2. We have a pupil summary for the maths papers in total. ASP doesn't have this.

3. We use graphical analysis, so you can quickly see at a glance the analysis you need. ASP has no graphs whatsoever – it is merely numbers.

4. We have summaries in plain English showing: Pass rate, Top questions, Progress for your boys and girls, and Questions to look at.

5. We use graphs showing the spread of your pupils' outcomes against "expected" (what would have happened had progress been zero for each pupil).

6. DAISI's QLA gives you reports by cohort GROUPS e.g. gender, SEN, EAL and FSM and analysis by Low, Middle and High Prior Attainers & Non-mobile and Mobile pupils ASP only focuses on your entire cohort.

7. We have easy to read heat maps showing trends for your pupils of where they started to drop marks.

8. DAISI provides progress score calculations and scatter graphs for your pupils who took the test, so you can see your outliers.

9. You can come back to your QLA analysis in future years, to see if there is a trend over time.
(You can't see QLA for previous years in ASP.)

10. For LAs and MATs, we can create comparisons of individual schools against LA/MAT, both for all pupils and for the individual cohort groups.
Against LA/MAT averages,and against individual LA/MAT schools at an aggregated level
(per category type and per cohort type).
